Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The present ligand can be incorporated into the conjugates of the invention. The specification describes a conjugate, comprising a targeted agent and a chemokine receptor ligand. The conjugate binds to a chemokine receptor resulting in internalisation of the targeted agent in cells bearing the receptor. The conjugates are used for formulating a medicament or for treating disorders associated with inflammatory responses resulting from activation, proliferation and migration of immune effector cells. The disorders or disease states comprise secondary tissue damage such as central nervous system (CNS) injury, CNS inflammatory diseases, inflammatory hard diseases, inflammatory point diseases, inflammatory nasal diseases, inflammatory lung diseases, inflammatory nasal diseases, inflammatory lung diseases, inflammatory nasal diseases, inflammatory thyroid diseases such as thyroiditis, or cytokine-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              1 QPDAINAPVTCCYNFTNRKISVQRLASYRRITSSKCPKEAVIFKTIVAKEICADPKQKWV 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; chemokine receptor modulator; chemokine; HIV infection; AIDS; asthma; allergic rhinitis; atopic dermatitis; atheroma; antiinflammatory; antiastlergic; dermatological; antiarteriossclerotic; antirtheumatic; antiatheriosalpatesive; MCP-1; atherosclerosis; organ transplant rejection; rheumatoid arthritis.
                                                                                                                                                                                                                                                                  The invention relates to polymer-modified bioactive synthetic chemokines and to methods for their production and use. The compounds and methods of the backbone of the invention are useful in the analysis and treatment of various diseases states e.g. HIV and AIDS related disorders, asthma, allergic rhinitis, atopic dermatitis, atheroma/atheroma/atherosis, organ transplant rejection, and rheumatoid arthritis. This sequence represents the human chemokine MCP-1 protein of the invention
immunosuppressive; polymer-modified bioactive synthetic chemokine; HIV; AIDS; asthma; allergic rhinitis; atopic dermatitis; rheumatoid arthritis; atheroma; atherosclerosis; organ transplant rejection; MCP-1.

                                                                                                                                                                                                                                                                                                              The present invention relates to chemokine receptor modulators, which comprise a chemokine polypeptide chain modified at N-terminus with an aliphatic chain and at least one amino acid derivatives and/or modified at its C-terminus with an aliphatic chain or polycyclic. The modulators can be used to treat diseases such as HIV infection, AIDS, asthma, allergic fininits, atopic dermatitis, atheroma, atherosclerosis, organ transplant rejection and rheumatoid arthritis. The present sequence is the human MCP-1 protein
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human, monocyte chemoattractant protein-1, MCP-1, C-C chemokine family, pulmonary hypertension, primary, hypotensive.

Glutamic Acid or Glutamine: 18 and 19; 18 and/or 19, together with 58; 18 and/or 19, together with 66; 18 and/or 19, together with 66; 18 and/or 19, together with 66; 18 and/or 19, together with 24, 44, 49 and/or 75. A protein of the invention has immunosuppressive, antiinflammatory, cytostatic, antimicrobial, and vasotropic activity. The protein may have a use in gene therapy, and in a vaccine. The MCP proteins are human MCP-1, human MCP-2, human MCP-3, human MCP-4 or human Botaxin. The MCP anteagonists are useful in preparing a composition for treating or preventing diseases traladed to excessive leukocyte migration and activation, e.g., vascular disorders, cancer, inflammatory or autoimmune disease or infection. The present sequence is used in the exemplification of the invention.

hypertension, comprising an antegonistic inhibitory mutant of monocyte chemoattractant protein-1 (MCP-1), DNA encoding the mutant MCP-1, or a neutralising antibody against MCP-1. DNA encoding the mutant MCP-1, or a chemokine family. The preventives and remedies have hypotensive activity and can be used in the prevention and treatment of pulmonary hypertension particularly pulmonary primary hypertension. The present sequence
Preventives and remedies for pulmonary hypertension containing mutant of MCP-1 antagonistic inhibitory type or its salt, encoded DNA or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QPDAINAPVICCYNFINRKISVQRLASYRRITSSKCPKEAVIFKTIVAKEICADPKQKWV 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The present invention relates to a nuclear targeting peptide (ADE80826) comprising a nuclear targeting domain isolated from the C-terminal sequence of the ESkine and PESKY chemokines. The nuclear targeting domain allows the protein to translocate to the cell nucleus. The nuclear targeting peptide is useful in preparing a medicament for treating cancer, particularly Burkitt's lymphoma or nasopharyngeal carcinoma. The present sequence is a chemokine sequence, used in a sequence alignment in

A protein of the invention has immunosuppressive, cardiant, neuroprotective, antimicrobial, and cytostatic activity. A polymucleotide of the invention may have a use in gene therapy. The protein, nucleic acid, composition and method are useful for diagnosing or treating a MCP-1 mutein-related condition, e.g. immune, cardiovascular, neurologic or infectious or malignant disorders. The present sequence represents human MCP-1.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New monocyte chemoattractant protein-1 (MCP-1) mutein nucleic acid, useful for diagnosing or treating a MCP-1 mutein-related condition, e.g. immune, cardiovascular, neurologic or infectious or malignant disorders.

```
An expression plasmid, pHMC076 for producing MCF(76) consisting of 76 amino acids was constructed. DNA encoding MCF(76) was prepd. using a recombinant plasmid pHMCF7. (Updated on 25-MAR-2003 to correct PN field.)
           Plasmid, monocyte chemotactic factor; MCF; translation; termination; terminator; initiation; ribosome binding site; RBS; promoter; tryptophan;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             24 QPDAINAPVTCCYNFINRKISVQRLASYRRITSSKCFKEAVIFKTIVAKEICADPKQKWV 83

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ਨੇ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         This is a human-derived monoyte chemo-attractant peptide (MCP-1) sequence mol. mass of c.a. 8,400 D. MCP-1 can be used for treating infection eg inflammatory disease, or for the control of neoplasms by accumulation of monocytes at the site of the infection. The corresp. DNA is obtd. by chemical synthesis, by screening reverse trascripts of mRNA from purified blood leukcytes or cell cultures of eg U-373 MG or KMG-E. (Note: Revised entry submitted to correct the patent number format of US Government-numbers. For further information please with negoing US granted patent numbers.                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                AAR73914 is the chemokine Human monocyte chemoattractant factor hMCP-1. It contains the meningitis related antigenic sequences (MRHAS) claimed in AAR73895 and AAR73807, which are recognised by a monoclonal antibody from the hybridoma Rubella virus (RV)-1. The claimed MRHAS peptides may be used in immunoassays to diagnose the presence of bacterial and/or viral meningitis agents in a sample, or in prophylactic and therapeutic meningitis Lreatments. The peptides may also be used as vaccines against (Updated on 25-MAR-2003 to correct PN field.)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a monocyte chemoattractant peptide (MCP) designated MCP-1. MCPs can be isolated from human glioma cell line U-
                           Purified heparanases, prepared under reducing conditions and activated with transglutaminase, are given in AAR70786-804. Most are prepared by reverse transcription of mRNA from activated human leukocytes, then cloning of the cDNA into pVL1392 baculovirus vector, and expression in $f9 cells in the presence of reduced glutathione and dithiothreitol. (Updated on 25-MAR-2003 to correct PN field.)

"Cloning and expression of rhesus monkey monocytes and basephils

Submitted (APR-2000) to the EMBL/GenBank/DDBJ databases.

-!- FUNCTION: Chemotactic factor that attracts monocytes and basephils

similarity).

-!- SUBUNIT: Monomer or homodimer; in equilibrium (By similarity).

-!- SUBUNIT: Monomer or homodimer; in equilibrium (By similarity).

-!- SUBUNIT: Belongs to the intercrine beta (chemokine CC) family.

Important factor in the course of the inflammatory reaction no reperfusion of the previously ischemic myocardium.
May play a significant role in monocyte trafficking into the reperfused myocardium.
SUBDNIT: Monomer or homodimer; in equilibrium (By similarity).
SUBCELULAR LOCATION: Secreted.
TISSUE SPECIFICITY: Endothelium of small veins and intrafascicular veins, and infiltrating leukocytes.
INDUCTION: By INF-alpha leukocytes.
SIMILARITY: Belongs to the intercrine beta (chemokine CC) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      TISSUE-Jugular vein endothelial;

Prost P., Wayte A., Lenearts J.-P., van Damme J.;

Pruffication, sequence analysis, and biological characterization of a second bovine monocyte chemotactic protein-1 (Bo MCP-1B).";

Blochemistry 33:13406-13412(1994).

Ascord bovine monocyte chemotactic factor that attracts monocytes, but not cherrophils. Augments monocyte anti-tumor activity. Also induces the release of gelatinase B. This protein can bind heparin.

C. -I- FUNCTION: Chemotactic factor that attracts monocytes, but not neutrophils. Augments monocyte anti-tumor activity. Also induces c.-I- FTM: The N-terminus is blocked.

C. -I- PTM: The N-terminus is blocked.

C. -I- SIMILARITY: Belongs to the intercrine beta (chemokine CC) family. Hash: PROSSIP: DRO0049; ICB; I.

R. RESP: PISSOO 1807; CC Chemkine Sml.

R. REM: PROSO199; SCY: I.

R. SMART; SMO0199; SCY: I.

R. Cytokine; Chemotaxis; Heparin-binding.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    24 QPVGINTSTTCCYRFINKKIPKQRLESYRRTTSSHCPREAVIFKTKLDKELCADPTQKWV 83
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 OPDAINAPVTCCYNFTNRKISVQRLASYRRITSSKCPKEAVIFKTIVAKEICADPKQKWV
                                                                                                                                                                                                               -!- SUBUNIT: Monomer.
-!- SUBCELLULAR LOCATION: Secreted.
-!- PTM: O-glycosylated.
-!- PTM: Similarity: Belongs to the intercrine beta (chemokine CC) family.
   Kwon D., Lee D., Sykes B.D., Kim K.-S.;
Submitted (AUG-1998) to the PDB data bank.
-!- FUNCTION: Chemotactic factor that attracts monocytes and
ecsinophils, but not neutrophils. Augments monocyte anti-tumor
activity, Also induces the release of gelatinase B. This protein
can bind heparin. Binds to CCR1, CCR2 and CCR3.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps

Sequence polymorphisms in the chemokines Scyal (TCA-3), Scyal monocyte chemoattractant protein (MCP)-1), and Scyall (MCP-5) are candidates for each, a locus controlling susceptibility to monophasic remitting/nonrelapsing experimental allergic encephalomyelitis.";

U. Immunol. 163:2262-2266(1999).

I. FUNCTION: Chemotactic factor that attracts eosinophils, monocytes, and lymphocytes but not neutrophils. Potent monocyte active chemokine that signals through CCR2. Involved in allergic chemokine. States and may play a pivotal role during early stages of allergic lung inflammation.

I. SUBCELLULAR LOCATION: Secreted.

I. SUBCELLULAR LOCATION: Secreted.

I. SUBCELLULAR LOCATION: Secreted.

I. SUBCELLULAR LOCATION: Secreted.

I. TISSUE SPECIFOTIY: Predominantly expressed in the lymph nodes, thymus. Also found in the salivary glands containing lymph nodes, breast, heart, lung, brain, small intestine, kidney and colon.

I. INDUCTION: By interferon gamma and lipopolysaccharides (LPS).

I. POLYMORPHISM: The polymorphism in strain SULJ, may be associated encephalomyelitis, an animal model of multiple sclerosis, and succephalomyelitis, an animal model of multiple sclerosis, and succephalomyelitis, an animal model of multiple sclerosis, and succephalomyelitis, an animal model of multiple sclerosis, and succephalomyelitish protein remitting/nonrelapsing form of the monophasic remitting/nonrelapsing form of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     MEDLINE=97149438; PubMed=8996246; Sarafi M. Solution structure of cotaxin, a chemokine that selectively recruits

eosinophils in allergic inflammation.";

J. Biol. Chem. 273:22471-22479(1998).

-!- FUNCTION: In response to the presence of allergens, this protein
directly promotes the accumulation of eosinophils, a prominent
feature of allergic inflammatory reactions. Binds to CCR3.

-!- SUBCELDULAR LOCATION: Secreted.

FEBS Lett. 395:277-282(1996).
-! FWOTION: Chemotactic factor that attracts monocytes, lymphocytes, lymphocytes, chemotactic factor that attracts monocytes, lymphocytes, basophils and eosinophils. May play a role in neoplasia and inflammatory host responses. This protein can bind heparin.
-! STBUNIT: Monomer or homodimer; in equilibrium.
-! TISSUE SPECIFICITY: Highest expression found in the small intestine and peripheral blood cells. Intermediate levels seen in the heart, placenta, lung, skeletal muscle, thymus, colon, ovary, spinal cord and pencreas. Low levels seen in the brain, liver, spinal cord and pencreas. Low levels seen in the brain, liver, spinal cord.
-! INDUCTION: By interferon gamma, mitogens and interleukin-1.
-! SIMILARITY: Belongs to the intercrine beta (chemokine CC) family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       SECURNCE FROM N.A., AND VARIANT GLN-69.

                                                                                                                                                                                                                                                                                                                                                                                  TISSUE SPECIFICITY: Widely expressed. Found in small intestine, thymus, colon, lung, trachea, stomach and lymph node. Low levels seen in the pulmonary artery smocth muscle cells.

INDUCTION: By interlevin-1 and TNP-alpha.

PTM: ONE MAJOR ISOFORM MCP-4, AND TWO MINOR ISOFORMS (IA) MCP-4 AND FFRENDITAL SIGNAL CLEAVAGE.

(LA) MCP-4 ARE PRODUCED BY DIFFRENDITAL SIGNAL CLEAVAGE.

(LA) MCP-4 IN THE PRODUCED BY DIFFRENDITAL SIGNAL CLEAVAGE.

MASS SPECTROMETRY: MW-9314; MW ERR=30; METHOD-MALDI; RANGE=17-98.

MASS SPECTROMETRY: WW-8576; MW ERR=30; METHOD-MALDI; RANGE=22-98.

MISCELLANBOUS: This protein can bind heparin.

SIMILARITY: Belongs to the intercrine beta (chemokine CC) family.
                                    Partels J.H., Schlueter C., Richter E., Noso N., Christophers E., Schroeder J.-M.; Achlueter C., Richter E., Noso N., Christophers E., Schroeder J.-M.; Achlueter C., Richter Barkers and F. Freezession of a MCP-4 like novel CC-chemokine in human dermal fibroblasts: molecular cloning and RT-PCR analysis."; Submitted (JUL-1996) to the EMBL/GenBank/DDBJ databases.
-! FUNCTION: Chemoteatic factor that attracts monocytes, lymphocytes, basophils and eosinophils, but not neutrophils. Signals through CCR2B and CCR3 receptors. Plays a role in the accumulation of Leukocytes at both sides of allergic and nonallergic inflammation. May be involved in the recruitment of monocytes into the arterial wall during the disease process of artherosclarosis. May play a role in the monocyte attraction in tissues chronically exposed to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             SMALL INDUCIBLE CYTOKINE A13, LONG FOR SMALL INDUCIBLE CYTOKINE A13, SHORT FC PYROLIDONE CARBOXYLIC ACID.

Van Darme J., Decock B., Mantcovani A.;

Put W., Opdenakker G., Mantcovani A.;

Production and identification of natural monocyte chemotactic protein from virally infected murine fibroblasts. Relationship with product of the mouse competence (JE) gene.";

Bur. J. Blochem. 199:223-229(1991).

-!- FINGTION: Chemotactic factor that attracts monocytes, but not neutrophils.

-!- SUBRINIT: Monomer or homodimer; in equilibrium (By similarity).

-!- SUBRINIT: Monomer or homodimer; in equilibrium (By similarity).

-!- SUBRINIT: Monomer or homodimer; in strain SJL/J may be associated with severity of clinical symptoms of experimental allergic with severity of clinical symptoms of experimental allergic susceptibility to the monophasic remitting/nonrelapsing form of the disease.
                                                                                                                                             9
                                                                                                                                                                                                              82
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       "Sequence oblymorphisms in the chemokines Scyal (TCA-3), Scya2 (moncoyte chemoattractant protein (MCP)-1), and Scyal2 (MCP-5) are candidates for each, a locus controlling susceptibility to monophasic remitting/nonrelapsing experimental allergic encephalomyelitis."; J. Immunol. 163:2262-2266(1999).

	by chance to have a

Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
